

Supporting clinical teams in their delivery of safe, high quality care and positive patient experiences

# How Kyra helps you create a patient-centred digital health journey

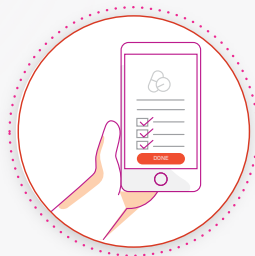

Kyra Clinical leverages technology to support today's smart mobile workforce, and is designed to meet the needs of diverse workforces within clinical settings. Our platform helps enable health professionals to capture and access information across the entire patient journey, empowering clinicians to provide high quality patient care.

Kyra Clinical is a digital platform that allows users to record and review information across the entire patient journey, empowering clinicians to provide high quality patient care.

## Flexible

Transitioning from paper to digital doesn't have to be complex, costly or time consuming. Begin your journey with only the features you need now, while paving a scalable pathway for the future.

## Access via your preferred device

Designed and built to securely access information from eligible web enabled desktops, tablets or mobile devices.

## Built for Interoperability

Connect siloed information from disparate clinical, business and patient management systems and to a wide range of specialised systems, including pathology, radiology, patient monitoring and pharmacy systems.

## Key Modules

Kyra Clinical platform provides comprehensive functionality while integrating with best of breed specialised systems. Including:

### Forms / Assessments

Fully configurable tools to capture clinical information and enhance clinical workflow automation and decision support. Data can be copied across forms, images and annotations added with all information easily shared. Data entered can drive clinically relevant triggers such as care pathways, as well as allow interrogation via business intelligence tools.

### Observations

A patient's specific observations and assessments to be recorded, viewed, and graphed. Customise default charts based on unit, age and gender and create specific clinical deterioration triggers and alerts.

### Progress Notes

Provide a seamless experience to record and view progress notes that is fast, efficient and easy-to-use for all clinical disciplines. Create an auto-saved progress note and move throughout the rest of the medical record at the same time.

### Clinical Pathways

Create a set of standardised tasks specific to a treatment protocol allowing clinicians to manage daily or predictive activities, milestones or observations in real time and tick off actions as they are completed.

### Medications Management

Provides end-to-end electronic medication management for medication history, medication on admission, administration chart and discharge medication reconciliation. Role-based AI support of clinical practice for prescribers and administration of drugs.

### Pathology and Radiology Orders

Place electronic requests that can be sent directly to the laboratory service provider or printed as a paper pathology/radiology order form and easily added to the discharge summary.

### Results

Receive pathology and radiology results, match them to the patient and populate into charts. Colour-coding is used to identify abnormal and critical results.

### Discharge Summary

Automate sending the discharge summary to My Health Record as well as secure distribution to GP and other care providers securely. Dashboards can monitor discharge summaries that aren't completed.

### Internal Referrals

Creates a work list for internal referrals for coordination of Multi-disciplinary Teams, with templates to capture key information that can be sent to external systems – by speciality, team or doctor

### External Referrals

Designed to receive external sources of information such as referrals, specialist letters and admission requests. Manage the triage process electronically, including accepting, declining and forwarding referrals to another department.

### Letters

Ability for organisations to create letter templates – by specialty, doctor and diagnosis and record in the clinical system what has been sent with acknowledgements.

### Scanned Medical Record

Digitise paper forms and provide electronic access to a patient's previous care information. Allows any paper documents such as signed consent forms and external correspondence to be added to the system to create a complete and comprehensive record.

### Document Repository (Documents View)

Document view screen that allows for the viewing of patient medical records and complies with the national standards and centrally locates all records in one place.

### Mobility

Mobile version of Kyra Clinical making information portable on phone or iPad. Providing the ability to go into a patient record and see patient allergies and alerts, falls risk, progress notes, observations and more.

## Benefits

### Helps Improve Patient Management

At a glance you can see where a patient is at on their clinical journey with rapid access to key clinical information.

### Centralise Information

A single source of patient information, from progress notes and clinical assessments to discharge summaries.

### Streamline Clinical Care

Assess and treat patients with features that support ongoing management and monitoring.

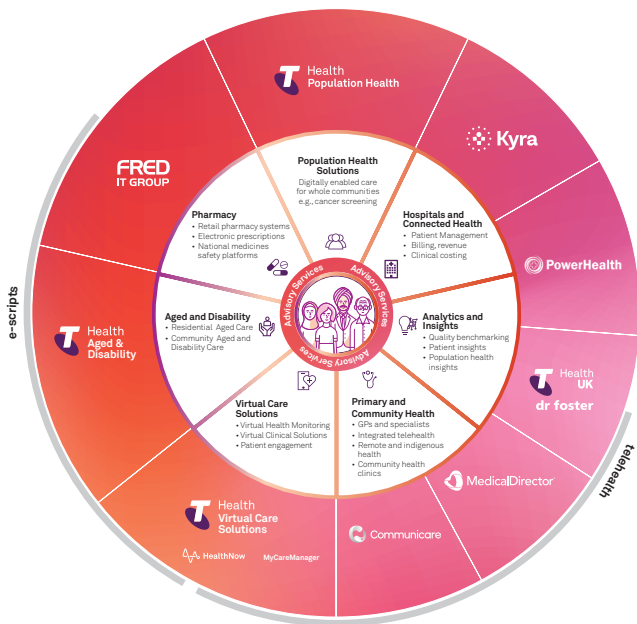

### Efficient And Compliant

Reduce paper, costs and claim times, drive quality outcomes, and help ensure reporting compliance.

# Telstra Health employs more than 1,400 people across 15 locations in Australia and the UK

We aim to improve lives through digitally-enabled care for our community. We do this by providing software products, solutions and platforms for care providers in the hospital, health service, pharmacy, and aged and disability care sectors.

Our community pharmacy platform processes **400 million transactions annually**

Our **Real Time Prescription Monitoring** platform has sent clinicians in Victoria:

**5.3m+**  
alerts

**>3.4m+**  
at-risk patient alerts

Australia's largest provider in residential aged care covering **62,000 beds**

Supporting aged and disability providers by providing safety and quality oversights and greater opportunities for social engagement

**16 million participant records** securely managed through our population health platform

**> 540+ public & private hospitals** across Australia use our **Kyra solution** and **20** have implemented **Kyra Clinical**

Supporting the National Health Service as a leader in healthcare data and insight – our metrics have been adopted as global standards in healthcare

**75%** of Aboriginal Medical Services (AMSs) use our **Communicare** platform

Our Virtual Health Monitoring solution has provided Metro South Health in Queensland with a 33.5% return on investment and direct cost savings through fewer home visits and transfers to hospital

Talk to us today about how your organisation can streamline the transfer of patient care via Kyra – our digital Hospital Platform.
